### **DETAILED ACTION**

1. This is in response to applicant's amendment filed November 22, 2004, in which claims 1-12 are canceled and claims 13-25 are pending.

#### ***Allowable Subject Matter***

2. After further search and thorough examination of the present application and in view of applicant's amendment, claims 13-25 are found to be in condition for allowance.

The following is an examiner's statement of reasons for allowance: the prior art (Tanoue US 5,608,765) discloses a transmitter apparatus (radio base station 100) and a front-end transmission processing unit (phase correction section 17) for converting transmission signal into a transmission time slot (column 2, lines 21-31) and a frame generator for generating a frame including a series of time slots and a frame guard period added to the series of n time slots to suppress a frame due to interference (column 3, lines 5-38 and figures 2A-3C).

On the other hand, the present applicant specifically teaches a synchronization position detector for detecting a starting position of an effective symbol period in the received signal; a timing generator for controlling an operation timing of a functional block, on the basis of synchronization position information supplied from the synchronization position detector; a reception windowing unit for extracting only an effective symbol period including no time guard period and no frame guard, under the control of the timing generator. These limitations, in conjunction with all other limitations

Art Unit: 2684

of the independent claims, have not disclosed, taught, or made obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
